***Organizing Committee of Fourth International Symposium
"Modern Problems of Aliphatic Diazocompound Chemistry"***

R.R. Kostikov	– chairman, St. Petersburg State University
L.L. Rodina	– deputy chairman, St. Petersburg State University
Yu.V. Tomilov	– deputy chairman, Institute of Organic Chemistry RAS, Moscow
I.N. Domnin	– St. Petersburg State University
E.O.Kalinin	– St. Petersburg State University
A.F. Khlebnikov	– St. Petersburg State University
T.A. Kornilova	– secretary, St. Petersburg State University
M.A. Kuznetsov	– St. Petersburg State University
A.P. Molchanov	– St. Petersburg State University
V.A. Nikolaev	– St. Petersburg State University
A.A. Potekhin	– St. Petersburg State University
V.V. Razin	– St. Petersburg State University

Honorary Advisory Board

U.H. Brinker	– University of Vienna, Austria
J.S. Clark	– University of Nottingham, United Kingdom
H.M.L. Davies	– University of New York at Buffalo, USA
T. Ibata	– Osaka University, Japan
D.V. Korol'kov	– St. Petersburg State University
O.M. Nefedov	– Institute of Organic Chemistry RAS, Moscow
A. Padwa	– Emory University, USA)
M. Regitz	– University of Kaiserslautern, Germany
B. Schulze	– Leipzig University, Germany
A.B. Valiotti	– Saint Petersburg State University

This conference is supported through financial contributions from

ELECTRON-IMPACT-INDUCED FRAGMENTATION OF DIAZODIARYLMETHANES

J. Kuruc^a, E. Kardošová^a, L. L. Rodina^b

^a Department of Nuclear Chemistry, Comenius University, 842 15 Bratislava, Slovak Republic

^b Department of Organic Chemistry, Saint-Petersburg State University, 198904 Saint-Petersburg, Russian Federation

The electron-impact-induced fragmentation (the mass spectra, 15-70 eV) of diazodiarylmethanes (diazodiphenylmethane, **Ia**; phenyl-*para*-methoxyphenyldiazomethane, **Ib**; phenyl-*para*-biphenyldiazomethane, **Ic**; 10-diazonaphthoquinone, **Id**; and 9-diazothiaxanthene **Ie**), was studied.^{1,2} Used diazodiarylmethanes were synthesised by conventional methods.³

The mass spectra were measured using Varian MAT 111 instrument with direct introduction of samples, with a source temperature of 120°C, energy of ionising electrons in the range 17-70 eV and 150 μA and sample reservoir laboratory temperature.

The elimination of diazogroup is typical reaction for fragmentation of diazocompounds after ionisation of molecules with electron impact.⁴ All investigated diazodiarylmethanes show the molecular ion with 1.6-30.4 % of relative abundance. Besides formation of typical ions $[M-N_2]^+$ we registered formation of non-conventional typical fragments $[M-C]^+$, $[M-N]^+$, $[M-C-N]^+$ and $[M-C-N_2]^+$. Doubly-charged ions were observed. For all investigated diazocompounds fragmentational schemes were proposed. At the energy of ionising electrons ~20 eV the dominating ions are $[M-N_2]^+$ fragments.

The dependence of abundance of molecular ions as well as of ionic fragments are presented in the Table 1.

Table 1. The per cent from total ionic current (numerator) and relative abundance (%), denominator) of molecular ions and ionic fragments of diazodiarylmethanes at 70 eV and 20 eV

No	eV	$[M]^+$	$[M-C]^+$	$[M-N]^+$	$[M-N_2]^+$	$[M-C-N]^+$	$[M-C-N_2]^+$
Ia	70	0,73/4,7	1,14/7,4	0,65/4,2	11,79/76,3	0,98/6,3	1,06/6,8
