Contents

Monitoring and Crisis system of radiation safety <i>Juraj Bartok, Peter Borovanský, Juraj Mačica, Martina Petrovičová</i>	9
Approximation of European Union Legislation on Medical Exposure in Slovak Republic <i>RNDr. Karol Böhm, Public Health Authority of the Slovak Republic</i>	13
Managment of patient and staff doses in interventional radiology <i>Bohm Karol, Nikodemová Denisa, Šalát Dušan, Drabová Dominika</i>	16
Estimated risks of radon-induced lung cancer by two-mutation model for different exposures in mines and in homes. <i>Radoslav Böhm, Denisa Nikodémová, Karol Holý</i>	20
Risk analysis of brachytherapy events <i>Pavla Buřičová, Helena Žáčková, Lenka Hobzovná, Josef Novotný, Anna Kindlová</i>	23
Building materials as the source of radiation load of Slovak population <i>Cabáneková Helena Slovak Medical University</i>	26
Education of medical radiation physicists in the Czech Republic <i>Tomas Cechak, Pavel Dvorak, Ladislav Musilek</i>	29
Improvement of national standard of X radiation <i>Jaroslav Compel, Slovak Institute of Metrology</i>	32
Testing of personal dosimetry systems <i>Jaroslav Compel, Slovak Institute of Metrology Jozef Dobrovodský, Slovak Institute of Metrology</i>	33
Data exchange between the este systems at the SÚJB Prague and at the BMLFUW Vienna in case of emergency. <i>Peter Čarný, Věra Starostová, Peter Hofer</i>	34
New functions of the este system – new possibilities for emergency response. <i>Peter Čarný</i>	36
The amount of ¹³⁷Cs in chosen parts of food chains from localities in the East of Slovakia <i>Andrea Čipáková</i>	40
Personal monitoring in the mine <i>Rožná I. Ing. Jiří Čumpl, Zdeněk Gregor</i>	44
Alanine-EPR dosimetry system for high industrial as well radiotherapeutic dose measurement <i>J. Dobrovodský, J. Bukovjan</i>	46
Verification of methodology for QUASAR phantoms used for quality assurance of nondosimetric parameters of 3D treatment planning systems <i>Petra Dostálová, Irena Pavlíková, Ivana Horáková, Milan Zouhar, Jana Bedrošová, Helena Žáčková, Daniela Ekendahl</i>	47
Development of radiation protection in intraoral dental radiography during the years 2002 – 2005 – analysis of postal audits results <i>Petra Dudlová, Leoš Novák</i>	51
Decision making process and emergency management in different phases of a nuclear accident <i>Tatiana Ďúranová, VUJE, a.s.</i>	55
Constancy Tests Radiography X-ray Devices with CR system <i>Milena Durdíková, Marcela Žáková</i>	61
Reference radiation fields of dosimetry quantities standards <i>N. Durný, J. Bukovjan, V. Jenis, T. Farkaš, J. Dobrovodský</i>	63
General Programs of Specialized Education of Radiological Physicists in the Czech Republic <i>Pavel Dvořák, Libor Judas, Vít Richter, Leoš Novák</i>	64
Nuclear detection systems in traffic <i>Tomáš Farkaš, Lucia Pernická, Anton Švec</i>	67
Production of multimedia textbook: Ionizing radiation and radiation protection <i>OPga Holá, Karol Holý</i>	71
²²²Rn in the outdoor atmosphere - trends, variations and radiation exposure <i>Karol Holý, Martin Bulko, Anna Polášková, OPga Holá, Ján Šimon, Radoslav Böhm</i>	74
Radiotherapy equipments for conformal radiotherapy and IMRT in the Czech Republic <i>Ivana Horáková, Irena Pavlíková, Josef Novotný ml.</i>	78
Evaluation of the Slovak national mammography QA audit and the consequences for mammography screening <i>Horváthová, M., Nikodemová, D.</i>	82
A comparative study of new type polymer gel dosimeters <i>Jan Hrbacek, Vaclav Spevacek, Josef Novotny Jr., Tomas Cechak</i>	85

Professional radiation exposure in nuclear medicine 2003 and its dependence on various factors – some results of SONS and questionnaire survey in the Czech Republic I <i>Václav Hušák, Jaroslav Ptáček, Karla Petrová, Z. Pašková, M. Mysliveček</i>	88
Reducing indoor radon concentrations by passive subslab ventilation <i>Martin Jiránek, Czech Technical University, Faculty of Civil Engineering, Praha</i>	92
Volume activity ²²⁶Ra mine waters of Ostrava-Karvina coal mines <i>Miroslav Jurda</i>	96
Evaluation and classification of mammographic departments during state supervision SÚJB <i>Eva Jursiková, Otto Kodl</i>	99
Acceptance of the EU regulations on mean doses of glandular on women's during mammographic examination in the Czech Republic <i>Otto Kodl, Eva Jursikova</i>	100
Přehled současného úsilí o pokrok v otázce malých dávek <i>Vladislav Klener</i>	101
Application of the mathematical modelling and human phantoms for calculation of the organ doses <i>Kluson J., Čechák T.</i>	103
Bilancování radioaktivních výpustí z jaderných elektráren ČR a hodnocení jejich vlivu na okolí <i>Josef Koc, Vladimír Kulich, Jiří Pospíchal, Jiří Vokálek, Jaroslav Hak, Libor Fiala</i>	106
Crisis Management of State Office for Nuclear Safety of Czech Republic <i>František Koldus, Věra Starostová</i>	112
Nuclear energy supports sustainable development <i>Vasil Koprda</i>	113
Dismantling and Disposal of the Chisobox Experimental Irradiator <i>Radim Kříž</i>	117
Sorption of strontium on bentonites from Slovak deposits <i>Jana Kufčáková, Michal Galamboš, Pavol Rajec</i>	119
ALARA calculations for removal PESL liner from inner concrete wall of the underground storage reservoirs in the NPP A1 by VISIPLAN 3D planning tool <i>Daniela Kucharová, Petra Mičková, Ondřej Slávik, Martin Lištyk, František Šóóš</i>	121
Chemical Radioprotectors in Radiation Protection <i>Pavel Kuna</i>	124
Biodosimetric Methods for the Evaluation of Radiation Damage to the Organism <i>Pavel Kuna, Leoš Navrátil, Jaroslav Racek, Ondřej Scheinost, Eva Kantorová, Hana Šiffnerová, Jan Singer, Ladislav Beránek, Renata Havránková, Pavlína Martinů</i>	126
Mathematical Simulation of Gas Pressure in Fibre-Reinforced Concrete Container at Radiation and Biological Decomposition of Cellulose, Bitumenized and Concrete Radwastes <i>Jozef Kuruc, Peter Kvito</i>	130
A new evaluation of the cases of internal contamination with ²⁴¹Am from the year 2001 <i>I.Malátová</i>	134
Verifikácia dávkovej distribúcie IMRT polí <i>P.Marko, J.Cibiková</i>	138
Radiation monitoring network of the Slovak Hydrometeorological Institute <i>Tereza Melicherová</i>	139
Study of radiation situation around the MAPE <i>Reza Mirchi, Michal Fejgl, Václav Michálek</i>	142
The evaluation of the results of an independent radiation monitoring in the vicinity of the A-1 NPP currently under decommissioning <i>Jozef Morávek, Ondrej Slávik</i>	145
European handbook for the management of recovery options in contaminated inhabited areas following a radiation incident <i>Adela Mršková, Tatiana Ďúranová</i>	146
Radon exposure, chromosomal aberrations, and genetic polymorphisms in selected Slovak cave workers <i>Mušák E., Vičanová M., Vodička P., Hanová M., Buchancová J., Moravčíková K., Klimentová G., Vodičková, L., Pěč, M.</i>	151
Radiation burden of patients due to mammography <i>Leoš Novák</i>	155
Dose Assessment in panoramic dental radiography <i>Leoš Novák</i>	160

Standardization of dosimetry in diagnostic radiology <i>Leoš Novák, Ivana Horáková</i>	162
Independent checks of linear accelerators equipped with multileaf collimators <i>Irena Pavlíková, Daniela Ekendahl, Ivana Horáková</i>	164
System of institutional radioactive waste management in the Nuclear Research Institute Řež plc <i>Josef Podlaha, Patrick Burian</i>	168
Monitoring of Primary Circuit and Reactor of NPP A-1 <i>M. Prazska, D. Majersky, J. Rezbarik, S. Sekely, P. Vozarik, R. Walthery, P. Stuller</i>	172
Radiation protection of nuclear medicine workers in the Czech Republic in 2003 – some results of SONS and questionnaire survey II <i>Jaroslav Ptáček, Václav Hušák, Karla Petrová, Zuzana Pašková, Ivo Přidal</i>	176
NPP Bohunice - radiation protection indicators for last 10 years <i>Tibor Rapant</i>	180
Separation of actinides and strontium by extraction chromatography on Diphonix® Resin <i>Oľga Roszkopfová, Diana Holková</i>	185
„Independent“ Monitoring of the Aerosol Effluents from NPP Provided by SÚRO <i>Petr Rulík, Vendula Pfeiferová, Rostislav Štaubr, Josef Tecl, Zoltán Holgye, Eva Schlesingerová,</i>	187
Vertical distribution of ⁹⁰Sr and ¹³⁷Cs in uncultivated soil in three localities of central Bohemia <i>E. Schlesingerová, P. Hejnová, J. Tecl, R. Mirchi, L. Šetrna, L. Macurová</i>	190
Study of Radiation Protection at the Department of Radiology and Toxicology, Faculty of Health and Social Studies of University of South Bohemia <i>Jan Singer, Pavel Kuna</i>	195
Radiological characterisation of contaminated concretes from the object 44/20 of NPP A1 <i>Ondrej Slávik, Martin Lištjak, Igor Pély, František Šoóš</i>	199
ALARA radiation protection applications at NPP A1 decommissioning using VISPLAN planning tool <i>Ondrej Slávik, Daniela Kucharová, Martin Lištjak</i>	203
Neutron and photon energy spectra at cyclotron CYCLONE 18/9 for production of PET radionuclides <i>Marko Fülöp, Daniel Baček, Ondrej Szöllos</i>	208
Aircraft crew exposure – new developments and results <i>František Spurný, Ondřej Ploc</i>	211
Dosimetry onboard International Space Station. Recent results, calibrations, studies in preparation <i>František Spurný</i>	216
Results of atmospheric ¹⁴C monitoring and its comparison with other European stations <i>I.Svetlík, R. Mirchi, V. Michalek, L. Tomaskova</i>	220
System and Experiences in the Area of Radioactive Material Seizure Assurance <i>Karel Svoboda, Josef Podlaha, David Šír, Nuclear Research Institute Řež plc.</i>	222
Some important aspects of digital radiology <i>Dušan Šalát</i>	225
Radiation control at open-air sediment fixation facility <i>Štefan Ševečka, Zuzana Holická, František Šoóš</i>	227
Analysis of $\Delta^{14}\text{C}$ variations in atmosphere <i>Ján Šimon, Alexander Šivo, Marta Richtáriková, Karol Holý, Anna Polášková, Oľga Holá, Martin Bulko</i>	229
The Determination of the Radiation Burden to Patients in Computed Tomography Examinations <i>Ondřej Šmejkal</i>	233
Results of Independent Monitoring of Releases of Noble Gases from Nuclear Facilities Collected by the SÚRO Prague <i>Josef Tecl</i>	234
Characteristic of the New Scintillators for Alpha Radiation Spectrometry <i>L. Thinova, J. Tous, T. Trojek</i>	239
Gamma Spectrometry Method for Biomonitoring in the Area of NPP Temelín <i>L. Thinova, T. Cechak, J. Kluson, T. Trojek</i>	242
Review of the Decontamination Activities including Radiation Protection Criteria during the Outages at Temelín NPP <i>Ivan Tichý, Radek Trtílek, Petr Werbynský</i>	244
Osobní dozimetry CSOD – harmonizace v rámci EU ve vztahu k nejistotám měření v limitních případech <i>Jaroslav Trousil, Jiří Plichta, František Spurný</i>	245
Releasing of Low Contaminated Solid Waste to the Environment at the Temelín Nuclear Power Plant <i>Radek Trtílek, Petr Zapletal</i>	250

National radiology standards in X-ray diagnostic incl. interventional radiology <i>Vlastimil Válek, Pavel Kratochvíl</i>	251
Development and extension of TLD audit in radiation therapy in the Czech Republic <i>Jiří Valenta, Daniela Ekendahl</i>	253
Analysis of Radionuclide Generation in Primary Circuit Water of LVR-15 Reactor <i>L. Viererbl, Z. Lahodová, A. Horák, M. Marek, A. Voljanskij</i>	256
Reduction of Systematic Error of In-Vivo Measurement of Americium 241 Activity in the Skull <i>Tomáš Vrba</i>	260
The radioactivity of bottled mineral waters <i>Vršková Marta, Babaríková Františka, Belanová Alena</i>	264
Problematika vyhodnocování osobního dávkového ekvivalentu $H_p(10)_N$ od neutronů v místnostech kontejmentu v Jaderné elektrárně Temelín <i>Zdeněk Zelenka, Jaroslav Trousil, Martin Schacherl</i>	265

Mathematical Simulation of Gas Pressure in Fibre-Reinforced Concrete Container at Radiation and Biological Decomposition of Cellulose, Bitumenized and Concrete Radwastes

Jozef Kuruc, Peter Kvito

Department of Nuclear Chemistry, Faculty of Natural Sciences, Comenius University, Mlynska dolina CH-1, 842 15 Bratislava, Slovakia, kuruc@omegainfo.sk

Fibre-reinforced concrete container (FRCC) are used for long-time repository of radioactive wastes (radwastes). FRCC were developed by French company SOGEFIBRE [1], in the Slovak Republic are produced by the VYZKONT Ltd., Trnava [2]. Dimensions of FRCC are 1.7 x 1.7 x 1.7 m, with inner dimensions 1.450 x 1.450 x 1.430 m. Thickness of side wall is 0.100 m, bottom 0.125 m and top 0.145 m (mean 0.112 m). Total mass of empty FRCC is 4240 kg. The FRCC is filled with cement grout up to 30 mm from upper brink; this represents so-called free volume of FRCC.* On the Fig. 1 the FRCC filled by barrels with pressurised cellulose wastes and barrels with bitumenized radwastes is shown. The remainder inner volume of FRCC is filled with active or not active cement grout. The portion of individual types of wastes deposited in FRCC (middle values) are on the Fig. 2.

Fig. 1. The FRCC filled with barrels with pressurized cellulose wastes and with bitumenized radwastes.

Low- and middle-active radwastes from operation of the NPPs V-1, V-2 Jaslovske Bohunice, Mochovce NPP and from decommissioned NPP A-1 (Jaslovske Bohunice) are treated in the plant SE-VYZ in Jaslovske Bohunice [3] and after immobilisation are deposited in National Radwaste Repository Mochovce (RU RAO) [4]. After filling of the RU RAO, FRCC will be stored during 300 years. During this time the integrity of the FRCC must be guaranteed.

* Free volume of FRCC in the present time increases by storage of dilatation layers of extruded polystyrene on the inner side and on bottom of FRCC (2 cm thickness, 5 sides of FRCC).

Fig. 2. The portion of individual types of wastes deposited in FRCC (middle values).

Autoradiolysis and biological decomposition of wastes in FRCC

By the influence of autoradiolysis of the cellulose and bitumenized radwastes as well as in cement grout the gases are formed, mainly the hydrogen, methane and carbon dioxide. In the case of presence of available water ($a_w \geq 0.63$) and in presence of microbes and moulds at appropriate conditions the biological decomposition of cellulose materials may proceed with formation of H_2 , CH_4 and CO_2 . With increasing of developed gases may increase pressure in FRCC, that may initiate the loss of integrity of the FRCC with following endangering of radiation safety of the RU RAO, respectively of the territory over the repository.

By this reason *Kuruc, Macásek a Kolarová* viewed the rate of biological and radiolytical decomposition of radwastes deposited in FRCC and simulated course of pressure conditions within FRCC [5]. It was found out that some cellulose radwastes contain microbes and moulds, which can initiate the formation of gaseous products in suitable conditions. Consecutively *Kuruc* developed new mathematical model of pressure of gases in FRCC and in deposited barrels with cellulose and bitumenized radwastes [6]. Derivation of the mathematical model as well as detail description of mathematical functions and important chemical reactions were presented during the conference 7th Banska Štiavnica days [7] and detailed published [8].

Mathematical Model of Gas Pressure in Fibre Concrete Container

On the Fig. 3 the scheme of mathematical model of gas pressure in the FRCC is represented. The maximal specific rate of microbial formation of gases [5] (in anaerobic conditions) is $a = 0.002 \text{ cm}^3 \text{ g}^{-1} \text{ day}^{-1}$. From the data on radwastes deposited in FRCC [5] it results that the total mass of radwastes, m_s , including bitumen and grout reaches: m_c – mass of cellulose in FRCC $\approx 250 \text{ kg}$; m_b + salts – mass of bitumen and radioactive salts $\approx 1020 + 30\% \text{ salts} \approx 1,326 \text{ kg}$; m_z + salts, mass of cement grout and radioactive salts $\approx 2,860 + 16\% \text{ salts} \approx 3,318 \text{ kg}$; together $m_s \approx 4,894 \text{ kg}$. From the maximal permissible activity 74 TBq/FRCC [9] arises, that specific activity can reach $74 \text{ TBq}/4,894 \text{ kg} = 15.12 \text{ MBq g}^{-1}$. From this specific activity and energy of ^{137}Cs we obtained [8] the dose rate $\dot{D}_{\text{max}} \approx 3.3 \text{ mGy s}^{-1}$, which is the maximal permissible value in FRCC. Used initial input parameters and the qualified conservative assessment of critical parameters are presented in our previous paper [8].

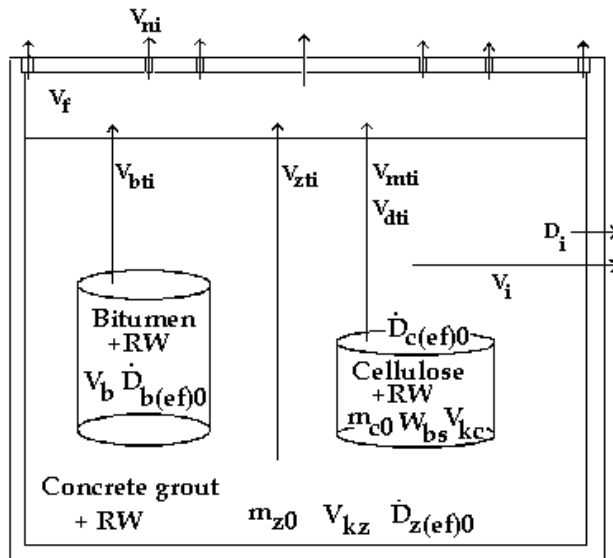

Fig. 3. Scheme of the mathematical model of gas pressure in FCC.

The mathematical model of gas pressure in FRCC is programmed in MS Excel 2000™ (the total number of variables is 25, and 46 equations). In this mathematical model the diffusion through the walls of FRCC is the main process responsible for decreasing of the pressure. According to [11] the diffusion constant of tritium in concrete is equal to $5.49 \times 10^{-11} \text{ m}^2 \text{ s}^{-1}$. Relative to molecular mass of tritium and main gaseous products of decomposition H_2 , CH_4 and CO_2 , according to the relation (1) their diffusion constants in concrete ($A = {}^3\text{H}_2 = \text{T}_2$; $B = \text{H}_2, \text{CH}_4, \text{CO}_2$ and CO) are

$$D_B = D_A / \sqrt{M_B / M_A} \quad (1)$$

respectively: $D_{\text{H}_2} = 9.51 \times 10^{-11} \text{ m}^2 \text{ s}^{-1}$, $D_{\text{CH}_4} = 3.36 \times 10^{-11} \text{ m}^2 \text{ s}^{-1}$, $D_{\text{CO}_2} = 2.03 \times 10^{-11} \text{ m}^2 \text{ s}^{-1}$ and $D_{\text{CO}} = 2.54 \times 10^{-11} \text{ m}^2 \text{ s}^{-1}$ (the values are calculated by us). This model was developed in two basic variants:

1. Mathematical model of gas pressure in FRCC as function of dose, Fig. 4.

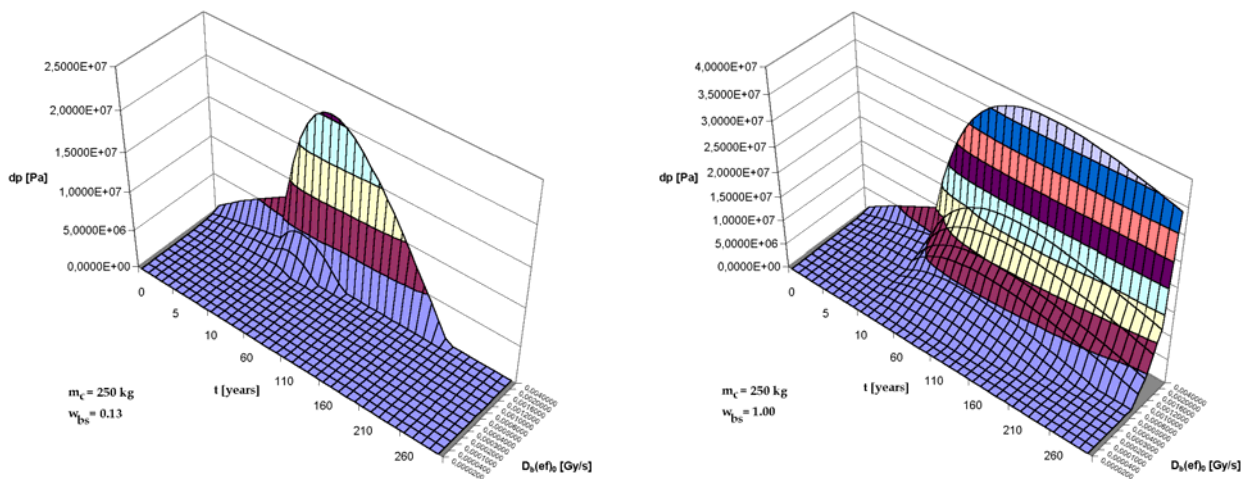

Fig. 4. Pressure simulation inside of FRCC in dependence on dose rate at initial mass of cellulose wastes (m_c) and available water (w_{bs})

2. Mathematical model of gas pressure in FRCC as function of mass of cellulose, Fig. 5.

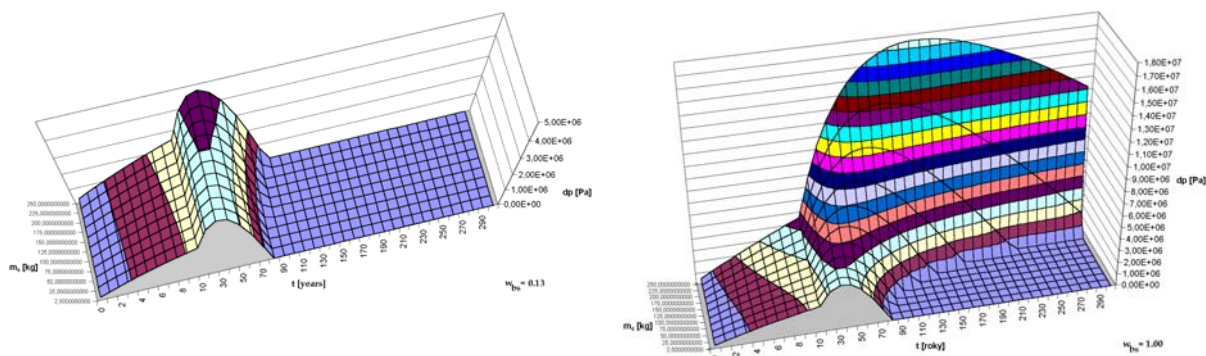

Fig. 5. Pressure simulation inside of FRCC in dependence on initial mass of cellulose m_c and available water (w_{bs})

Acknowledgement

This mathematical model was developed by the Omega Info and financed by the Nuclear Regulatory Authority of the Slovak Republic (UJD SR), ZoD 2-Š/2002, that is gratefully appreciated.
